1. YOUR LINK TUBULAR MOTOR

INTRODUCTION

Thank you for choosing the Forest Link Tubular motor for the Atlantis® roller blind system and BCS® roman blind system.

This guide provides essential information on how to operate, maintain, and maximise the performance of your Forest Link Tubular 35mm motor.

In this manual, you'll find step-by-step instructions for usage and troubleshooting, as well as tips to ensure safe and efficient operation.

GENERAL

Please read this manual and the safety instructions carefully before using this Forest product.

Follow the instructions in this manual and keep it throughout the entire lifespan of the product.

This manual describes the setup and operation of the Link Tubular 35 mm motor.

Any use beyond the application scope defined by Forest is not permitted. Ignoring the instructions in this manual voids any liability and warranty from Forest Group.

FAQ

Why isn't the motor working?

- Check if you have paired a remote control. If your remote is not paired yet you need to pair the remote control with the motor by following the pairing instructions in your manual.
- Check if the RF control is active. If the RF control is inactive, you can reactivate it by pressing the motor button for 2 seconds to activate the RF control.

Why does the motor stop suddenly during operation?

- Check if the upper and lower limits are set correctly. If not, re-set the upper and lower limits according to the instructions in your manual.
- Check if the blind doesn't exceed the rated load. If so, reduce the load on the motor by adjusting the blind or checking that it meets the weight specifications.

Why does the motor only move in one direction?

- Check if the motor's limits are set correctly. If they are incorrect, then cancel the original limits and set new upper and lower limits following the instructions in your manual.
