

STEP 1

You can use the Hole Puncher when the track is installed or before it is installed.

STEP 2

Place the Hole Puncher flush with the end of the track.

STEP 2

Put the cutter in the channel. Make sure that you have grip by placing the both points in the channel too.

STEP 4

When you placed it straight in the channel press the Hole Puncher.

STEP 5

Now you cut one half of the slot.

STEP 6

Turn the end of the hole puncher 180 degrees. (only the part with cutter, not the red part)

STEP 7

Place the Hole Puncher at the opposite of the opening to cut the second half of the slot.

STEP 8

Place it straight in the channel and press the Hole Puncher.

STEP 9

Now you have created a full opening.

STEP 10

Place the Punch Endstop in the created slot of the track.

STEP 11

See step 10.

STEP 12

Finally turn the Punch Endstop in the desired position.

HOLE PUNCHER instructions

With the Forest Hole Puncher you can create a slot in an existing track so curtain carriers are easily replaced or added in our KS-Recess System. To cover the slot just use our Punch Endstop. The opening remains completely invisible. Depending on the way the Punch Endstop is placed, it allows for different hooks, making it suitable for wave curtains as well.
